RESEARCH INTERESTS

My research focuses on graph algorithms for (1) scalable machine learning, (2) market and diffusion modeling, and (3) fundamental problems in computer science (i.e., matching, coloring, etc.). Some of my previous works include massively parallel and streaming edge coloring, massively parallel and fair hierarchical clustering, and multi-agent games of influence. I am currently working on scalable matching, partitioning methods for high-dimensional geometry, a stable marriage model for the faculty hiring market.
