RESEARCH INTERESTS

My current projects focus on graph algorithms for (1) scalable machine learning, (2) market and diffusion modeling, and (3) classical problems in computer science (i.e., matching, coloring, etc.). Some of my previous works include distributed and streaming edge coloring, distributed and fair hierarchical clustering, and multi-agent games of influence. I am currently working on distributed matching, geometric minimum spanning tree, and a stable marriage model for the faculty hiring market.
